EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jennifer Reda (57,840) on 14 July 2006.

2. Please amend the **Abstract** as follows:

~~An image processing apparatus is disclosed in which input images are processed to generate texture map data for texture rendering a generated three dimensional computer model of object(s) appearing in the images. In order to select the portions of the images utilised, confidence data is generated indicative of the extent portions of the surface of a model are visible in each of the images. The images are then combined utilising this confidence data, where image data representative of different spatial frequencies are blended in different ways utilising the confidence data.~~ An apparatus is disclosed for generating frequency component image data representative of image information of a plurality of different spatial frequencies of an image of at least part of a subject from a predefined view. A receiver receives a plurality of images comprising image data representative of a subject from a plurality of view points. For each of a plurality of received images, frequency component image data representative of image information of a plurality of different spatial frequencies within images received by the receiver is determined, and projections of the frequency component image data projected to a predefined

view are also determined. Visibility data indicative of the relative visibility of portions of the surface of a subject from viewpoints is then determined. Portions of projections of frequency component image data are associated with the visibility data, and the visibility data associated with portions of projections are utilized to determine frequency component image data representative of frequency image information of an image of a subject from a predefined view.

3. Please amend the **claims** as follows:

(i) Cancel claims 36 and 40.

(ii) In claim 19, change "a projection generation unit operable to determine projections of frequency component image data determined by said determination unit to a predefined viewpoint" to:

-- a projection generation unit operable to determine projections of frequency component image data determined by said determination unit projected to a predefined viewpoint --.

(iii) In claim 37, change "A recording medium for storing" to:

-- A recording medium storing --

4. Claim 40 has been canceled because it claims ineligible subject matter (see the "Interim Guidelines," Official Gazette, 11/22/05).

Claim 36 has been canceled because "process steps for generating within a programmable computer, [an] apparatus," encompasses potentially non-enabling subject matter.

Claims 19 and 37 have been amended to correct minor informalities.

REASONS FOR ALLOWANCE

5. The following is an examiner's statement of reasons for allowance:

Applicant has rewritten previously objected dependent claims 9, 17, and 27 in independent form, and has incorporated the subject matter of previously objected dependent claims 4 and 22 into claims 1 and 19, respectively. (See paragraph 8 of the Office action mailed 10/20/05).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
